

# Census 2009

**Workforce Figures for Psychiatrists**

## **Foreword**

This year's census of the psychiatry workforce across England, Wales and Northern Ireland (Scotland carries out its own separate census) as on 31 December 2009 has taken place at a time when the NHS in England and Wales has been facing considerable financial pressures. After a decade of continuous growth in resource and service delivery it has found itself charged with achieving efficiency savings on an unprecedented scale. Both frontline clinicians and the whole supporting infrastructure have been challenged to do more with less.

Anecdotally there is an impression that the financial stringencies are starting to bite. Consultants report that vacated posts are not being replaced, or at least not without some delay. Regional Advisers report a reduction in consultant job descriptions coming through for College review. Additional paid Programmed Activities (PAs) above the core ten and time for Supporting Professional Activities (SPAs) are each coming under close scrutiny. Many Trusts are actively promoting unpaid extra leave not merely as a work-life quality benefit but also as a means of achieving cost savings.

In contrast there is an impression of marked difficulty in recruiting to both training and non-training sub-consultant posts. Many adverts for Specialty Doctor posts go unanswered. Despite the successes of a move to nationally co-ordinated recruitment to core training, progression through core training remains problematic. Higher trainees are experiencing increasing competition for consultant posts.

This background means that accurate workforce figures are needed more than ever. In times of growth the throughput of job descriptions by Regional Advisers or the number of Advisory Appointment Committees held could act as proxy measures of the state of consultant staffing. In steady state or shrinkage but survey methods such as this census become more important and yet more challenging to carry out as Trusts look to prioritise only the absolutely needful. Triangulation of census data therefore is important.

It is clear that some large Trusts have failed to participate in the census and this will have had a disproportionate effect on figures in some regions and specialities. Trust reconfigurations and extrapolation of missing data in the census of previous years make attempts to address this by further extrapolations inappropriate.

The Advisory Committee on Clinical Excellence Awards (ACCEA) nominal roll (<http://www.dh.gov.uk/ab/ACCEA/Nominalroll/index.htm>) lists those Trusts recorded by ACCEA as awarding clinical excellence awards to consultants whose main specialty is listed as "Psychiatry". Furthermore, the NHS Information Centre (NHS IC) publishes data on what it believes to be the NHS workforce in England gathered on 30 September each year ([http://www.ic.nhs.uk/webfiles/publications/workforce/nhsstaff9909/Medical\\_Dental\\_Staff\\_2009\\_Detailed\\_Results.Tables.xls](http://www.ic.nhs.uk/webfiles/publications/workforce/nhsstaff9909/Medical_Dental_Staff_2009_Detailed_Results.Tables.xls)). Comparisons of its data are included in the tables of the census results.

Overall the picture remains one of a move to more posts filled substantively and fewer by locums. The response rate makes it difficult to comment upon absolute numbers but the results are consistent with last year's view that 'the growth in consultant posts appears generally to have come to an end'. The numbers of non-consultant career posts (Associate Specialist, Staff Grade, and Specialty Doctor) depart from the NHS IC figures and this may reflect the process of moving to the new contract.

We again included questions about retirement plans of consultants but the number of Trusts providing this information was insufficient to provide robust data. This is probably because such information and that on retirement plans is not readily available to the individuals, usually in Human Resources Departments completing the census. As Trusts become ever larger, this problem is likely to be compounded although it should be in Trusts interests to have an accurate profile of their consultant workforce for future planning.

The College census remains an important part of its workforce intelligence and is sought by others (e.g. Centre for Workforce Intelligence, NHS Confederation) in their planning also. However it will need to review its methodology to ensure fitness for purpose in the new economic climate to achieve better penetration and fuller data gathering. As other data sources become more available there is increased opportunity for triangulation and also for more precise targeting of questions. Historically the census has focused purely upon NHS provision. As we move to a more devolved system with an increasing plurality of providers it may be appropriate also to look at independent and not-for-profit sector employers of psychiatrists.

Finally I am grateful to Charlotte Collins, College Workforce Manager, for her relentless pursuit of Trusts, for her collation and analysis of the data, and for production of this report. Thanks are also due to Medical Directors and Human Resources Managers for the time they have given to this task.

A handwritten signature in black ink, appearing to read "Andrew Clark".

Dr Andrew Clark  
Royal College of Psychiatrists' Workforce Lead  
18 October 2010

**A list of the Trusts that returned and those that didn't return a completed census according to the ACCEA Nominal Roll of Trusts employing Psychiatrists**  
**The Trusts that didn't return a census are shown in red**
